Apex Grid Insights — Energy & Multi-Utilities

Smart Multi-Utility Metering Infrastructure 2024

Converged AMI Architectures: Joint Deployments Across Electricity, Gas, and Water Grids

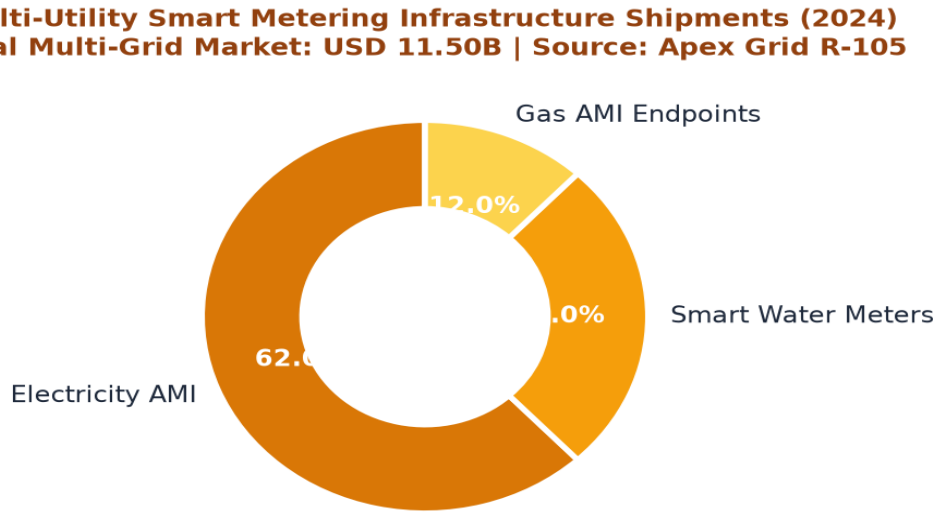

Report Identifier:	R-105	**Publication Date:**	August 5, 2024
Publisher:	Apex Grid Insights (Third Party)	**Access Classification:**	Public Excerpt Edition
Industry Sector:	Utilities	**Study Horizon:**	2024 Base; Forecast 2024–2029

Methodological Scope Notice

This public excerpt examines joint multi-commodity smart metering rollouts where municipal utilities co-locate electric, gas, and water telemetry across a single cellular or RF mesh communication backhaul. In 2024, total multi-utility AMI market spend stood at USD 11.50 billion, compounding at 10.1% CAGR.

1. Multi-Commodity Endpoint Distribution

Electricity meters represent 62% of physical gateway endpoints, acting as mesh routers that collect low-power telemetry packets from battery-powered smart water and gas meters.

Europe holds 35% regional revenue share due to national smart meter mandates across France (Linky), the UK, and Italy integrating electricity with residential gas and water grids.

2. Strategic Takeaways for Municipal Utilities

Shared communications infrastructure reduces total cost of ownership by up to 28% compared to single-commodity silos, creating joint procurement consortia worldwide.
