Aquila Insights — Energy & Infrastructure Practice

Smart Water Metering: Industry Outlook 2024

Global Manufacturing Dynamics, Component Supply Chains, and Hardware Endpoint Shipments

Report Identifier:	R-102	**Publication Date:**	June 18, 2024
Publisher:	Aquila Insights (Third Party)	**Access Classification:**	Public Excerpt Edition
Industry Sector:	Utilities / Water Equipment	**Study Horizon:**	2024 Base; Projected to 2029

Methodological Scope Clarification

This public excerpt edition evaluates factory-gate shipments of physical smart water meter hardware endpoints. AMR/AMI meters (mechanical, electromagnetic, ultrasonic) are measured. Turnkey installation services, software licenses, and cloud MDM subscriptions are strictly excluded.

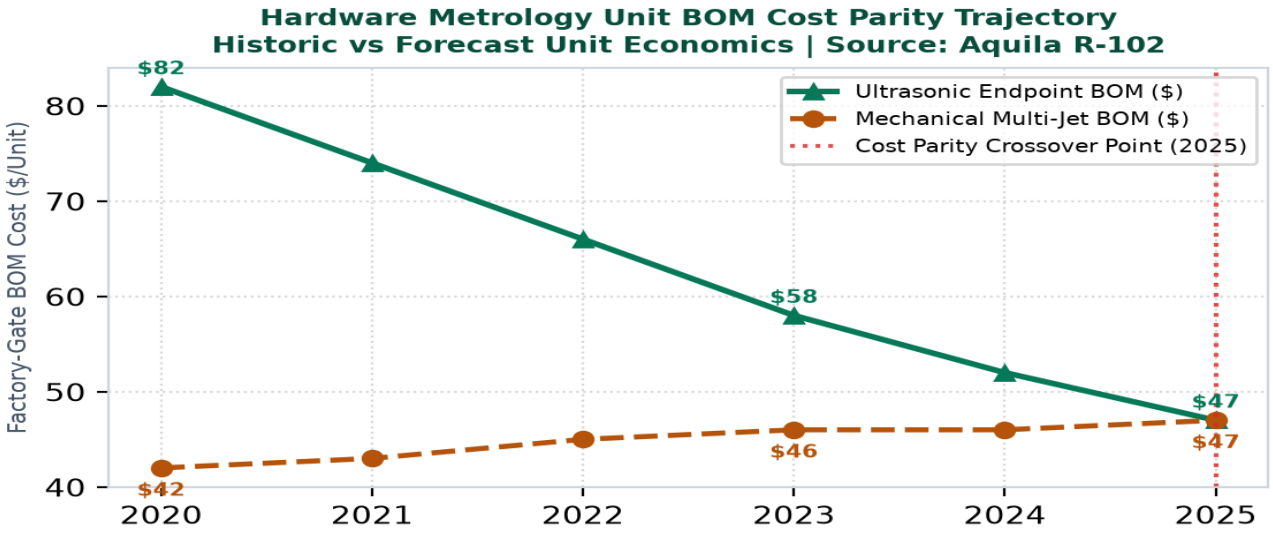

Section 1: Global Hardware Supply Chain & Foundry Capacities

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 2: Ultrasonic Sensor Production Economics vs. Mechanical Tooling

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 3: Raw Material Price Volatility: Brass vs Polymers

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 4: Subterranean Pit Ingress Standards: IP68 Potted Electronics

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 5: Lithium Battery Chemistries & Subterranean Lifespan

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 6: Non-Revenue Water Abatement via Metrology Precision

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 7: Residential Endpoint Unit Shipments & Demand

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 8: Commercial & Industrial (C&I;) Flow Meters

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 9: Cellular IoT Modem Cost Trajectories: NB-IoT vs LTE-M

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 10: Drive-By Radio Modules vs Fixed AMI Endpoints

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Section 11: Metrology Certification Standards: OIML R49 & MID

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

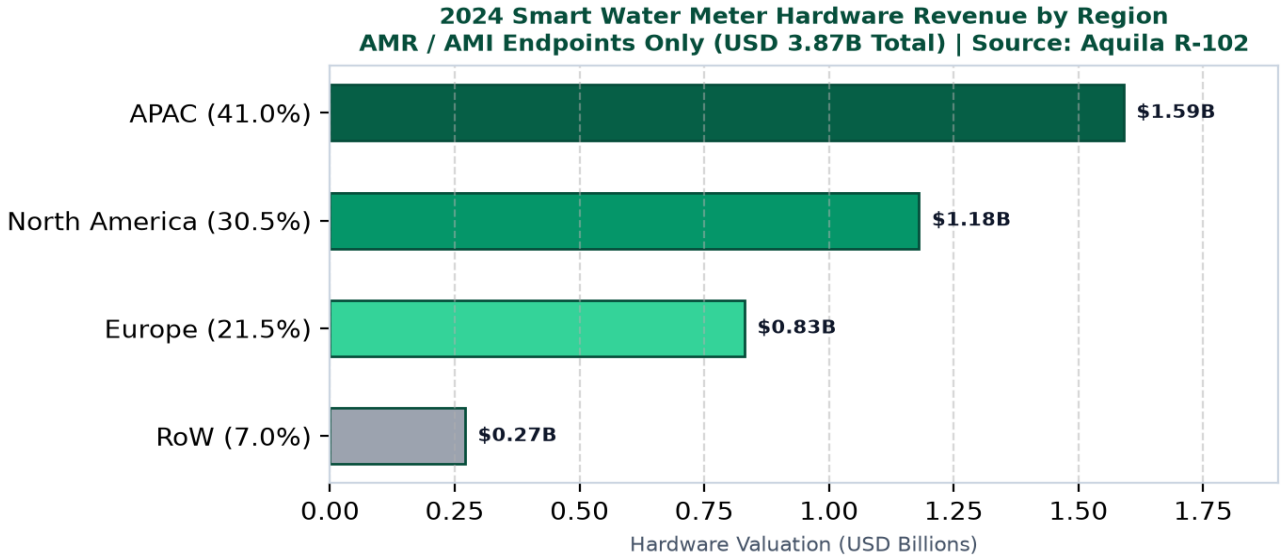

Section 12: Tariff Structures & Hardware Capex Allocations

Physical metering hardware endpoints continue to experience rapid technological shifts toward solid-state ultrasonic sensors, offering zero maintenance and high dynamic range.

Supply chains for microcontrollers and transceivers have stabilized post-pandemic, supporting consistent delivery schedules for large municipal utility tenders.

Chapter 13: Global Hardware Sizing & Regional Shipment Valuation

In 2024, the global smart water meter hardware market stood at USD 3.87 billion, demonstrating a 9.8% CAGR across the 2024–2029 projection horizon. The Asia-Pacific region dominated physical shipments, representing 41% of total global hardware revenue.

Scope Note: Figures represent factory-gate shipment revenues of physical AMR and AMI meters only, excluding cloud MDM platforms and utility deployment labor.
